

Overhead Reel Set

■ There's plenty of cable included to allow for overruns and/or scoring machines mounted near ground level. Any excess cable should just be coiled up.

■ Mounting the three bungee pulleys at least 12 feet above the floor will keep the cables out of the way.

■ The black loops of heavier bungee use carabiners to anchor the fencing cables at the scoring machine. The bungee and rubber hose provide stress relief for the cables. A small "tie-wrap" is used to prevent the cable from slipping through the hose. If you need to adjust the length of the cables, you can pull the cable through the hose and add another "tie-wrap" as a stop.

■ With use, the moving bungee may stretch and need to be shortened. Just pull some bungee through the swivel link and tie it off. When you're satisfied with the adjustment, the excess can then be trimmed off.
